E-TEC engines are the best-selling 2-stroke engines in snowmobiling.⁴

ROTAX ACE™ 4-STROKE ENGINES

With the Advanced Combustion Efficiency (ACE) family of engines, BRP engineers optimized the combustion system, reduced mechanical friction, and freed intake and exhaust breathing. The result is the most efficient engines in snowmobiling. Not only are they efficient, they're a pleasure to operate and own. Very little maintenance is required; they run smoothly and produce a nice, solid – yet quiet – sound.

ACE engines are the best-selling 4-stroke engines in snowmobiling.⁴

INTELLIGENT THROTTLE CONTROL

Standard on the ACE engines, the iTC™ system delivers a whole different snowmobiling experience.

- **Driving Modes:** A button on the console enables you to select one of three driving modes. Standard mode ensures a smooth start and linear acceleration; Sport enables full performance and quicker acceleration; ECO® limits top speed and acceleration rates for a more relaxed, fuel-conserving ride.
- **Finger Throttle:** The throttle block can be rotated forward for use as a finger throttle, if preferred. Great for changing hand positions on a long ride and for more control through bumps.

¹ Observed metric horsepower based on internal dyno test performed in optimal conditions.

² Data based on internal engineering trail testing.

³ Data based on internal engineering trail testing in ECO mode.

⁴ Based on retail sale results as of December 31, 2019.

Experience the advantage of XPS. Oil and care products engineered to extend the life of your ride, tested in the world's harshest conditions, and designed to optimize your vehicle's performance. Learn more at XPSlubricants.com

// SKIS

Skis make all the difference in getting your sled to handle just how you like. We offer eight different styles of skis for you to choose from. Which one is right for you? Here are some tips on choosing the right one:

PLATFORMS: REV GEN4 / XP / XR / XU / XS / XM / REV	TOURING			PILOT 5.7 SL 2 carbides/ski	<ul style="list-style-type: none"> Lightweight single or dual runner skis provide effortless steering at low speeds and constant grip without compromise at higher speeds. Standard use is one carbide runner—add a second to reduce darting. Great all-around trail performance. 	
		UTILITY			PILOT 7.4 1 carbide/ski	<ul style="list-style-type: none"> Specifically designed for utility purposes. Deeper keels allow more control while towing. Increased tip-up rear end for better reverse capability. 1 inch wider than Pilot DS-2 for improved flotation in deep snow. More aggressive cornering while keeping a light steering feeling.
	TRAIL SPORT				PILOT 5.7 1 or 2 carbides/ski****	<ul style="list-style-type: none"> Lightweight single or dual runner skis provide effortless steering at low speeds and constant grip without compromise at higher speeds. Standard use is one carbide runner—add a second to reduce darting. Great all-around trail performance.
				PILOT TS ADJUSTABLE 1 carbide/ski	<ul style="list-style-type: none"> The industry's first and only adjustable ski. The Pilot TS skis allow riders to change ski bite for changing snow conditions or riding styles easily and quickly. With the Pilot TS skis you dial in the perfect setting by turning a knob on the ski leg. The ski runner has 1/2" (12.5 mm) of travel up and down. The thin runner and square keel design work together to eliminate darting. 	
				PILOT X 1 carbide/ski	<ul style="list-style-type: none"> Completely redesigned from Pilot 5.7 with a new structural topside for 10% more rigidity. 31 mm longer keel with a new shape reduces darting. Adds 10% more lateral surface area and blends more smoothly with a new carbide. 11° degree reduction in approach angle. 	
				PILOT TX 1 carbide/ski	<ul style="list-style-type: none"> Improved to better match the REV Gen4 features. Redesigned top side for increased rigidity. 20 mm shorter overall length and more dramatic tip-up at the rear. 63 mm longer runner plate increases lateral surface for more effective cornering. Smoother front approach angle to reduce darting even further. 	
		TRAIL PERFORMANCE			PILOT R 1 carbide/ski	<ul style="list-style-type: none"> Straight from the MXZ X 600RS race sled. Very aggressive profile for sharp handling. Lightweight with high rigidity. Proven on the ISOC race circuit.
	DEEP SNOW				PILOT DS** 1 carbide/ski	<ul style="list-style-type: none"> Designed specifically for deep snow riding. Works well in many off-trail applications from utility sleds to mountain sleds. Thin edge is effective for grabbing side hills.
					PILOT DS-2 1 carbide/ski	<ul style="list-style-type: none"> Evolution of the DS with a deeper and shorter keel. Increased agility and less effort than the original. Great all-around ski for deep snow use. Standard on mountain sleds with 2.5" lug tracks and utility sleds.
				PILOT DS-3** 1 carbide/ski PILOT DS-3 REV Gen4** 1 carbide/ski	<ul style="list-style-type: none"> Deep snow ski designed to match the latest 3" lug and longer tracks. 0.47" (12 mm) deeper keel than DS-2. Works well for aggressive riders using the biggest tracks. 	

Does not fit REV Gen4. *Fits only REV Gen4. ****Second carbide can be added to ski by drilling marked additional holes.

Note: The use of aggressive skis, ski carbide runners or studs will alter the handling of your snowmobile, particularly in terms of maneuverability, acceleration and braking. Please refer to your Operators Guide for more details.

To install the studs, always use the installation tools, procedures and torque specified in the instructions. Proper installation provides maximum product longevity and helps prevent track damage. BRP recommends that studs be installed by authorized BRP dealers and on approved pre-patterned tracks only. These tracks come standard on most 2022 Ski-Doo snowmobiles. Look for this symbol on your track. Woody's products are designed to fit and interact with each other. The stud nut and support plate form a complete unit. The use of aggressive skis, ski carbide runners or studs will alter the handling of your snowmobile, particularly in terms of maneuverability, acceleration and braking. Please refer to your Operators Guide for more details.
